

## PRESS RELEASE

### Latour invests in Aqua Robur Technologies AB

Investment AB Latour (publ) has, through its subsidiary Latour Future Solutions AB, signed an agreement to invest in Aqua Robur Technologies AB ("Aqua Robur").

Aqua Robur designs and manufactures IoT equipment, sensors, energy-harvesting products, and software for the water industry. The company offers a complete solution to water companies in order to digitize their water networks by collecting data from all types of water pipes, with the objective to provide our vital water resource in a safe and efficient system in the future.

The business started in 2015 within Chalmers Ventures and today has 10 employees with headquarters in Gothenburg. The company has been awarded several prizes, including the European Union's 2 MEUR scholarship within Horizon 2020 as the best solution for water network monitoring. The company has about 200 installations at 30 customers and is now entering an exciting growth phase in the European market.

"With its patented technology, Aqua Robur is involved in digitizing the water industry. Their solutions contribute, among other things, to identifying leaks in freshwater pipes. A problem that in several European cities today amounts to losses of an unimaginable 25-50 percent of all freshwater produced. We have followed the team for a while and are proud to become active in their growth journey ", says Pelle Mattisson, CEO of Latour Future Solutions.

"Latour's investment in Aqua Robur means that we get a new strong and stable minority owner with a large industrial network, and it also opens up new expansion and development opportunities for us. We look forward to continuing to develop Aqua Robur together," says Niklas Wicén, VD Aqua Robur.

The investment has taken place via a directed share issue in Aqua Robur, where Latour Future Solutions AB has entered as a minority owner.
